| BATCH / LOT        | 83909087                                                          |                                                                                                                                                    |
| SAMPLE DESCRIPTION | Testing of a 10MG vial                                            |                                                                                                                                                    |

## ANALYSIS RESULTS

| ANALYSIS                          | RESULT              | PLAIN-ENGLISH MEANING                                                         |
|-----------------------------------|---------------------|-------------------------------------------------------------------------------|
| <b>Identity</b><br>(LC-MS / MS)   | <b>MATCH</b>        | Confirms whether the expected compound was detected in the submitted sample.  |
| <b>Purity</b><br>(HPLC-UV)        | <b>99.812%</b>      | The share of the measured analytical profile assigned to the target compound. |
| <b>Quantity</b><br>(ASSAY / qNMR) | <b>10.17 mg</b>     | The measured amount of target compound present in the submitted sample.       |
| OVERALL ASSESSMENT                | MEETS SPECIFICATION | <b>PASS</b>                                                                   |

|  |                                                                                                                                                                                                                                                                   |
|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <b>HOW TO READ THE RESULT</b><br>Identity tells you what it is. Purity describes the measured profile. Quantity tells you how much was measured.<br><b>Important: purity and quantity are different values. High purity does not confirm the labelled amount.</b> |
|--|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|                                                                                                                                                     |                                                                                                                                                                                                                                                                 |
